Your Car

For some years back when strictly in the wholesale business we declared a Post-Season Sale. The superiority of our stock was quickly shown on the market and the response has been so great since that we have been encouraged to continue our plan with an extensive plan of selling direct to the public of the city of Chicago and suburbs. We are now personally notifying you of the Seventh Bi-Annual Sale of Bulbs, Seeds and Nursery Stock and we can safely say that this is the largest ever held, where goods will be sold at cost of production and selling expenses, to clean out the over production of our nurseries.

Hendrik's "Real Green" Lawn Grass Seed—The Best in the West

HENDRIK'S REAL GREEN LAWN SEED

A mixture specially prepared by us. It has been used by landscape departments for many years and has proven superior to all other lawn mixtures which have been used.

The grasses in this mixture are absolutely hardy and Hendrik's REAL GREEN Lawn Seed will produce permanent lawns of deep green velvety appearance.

Price: 1 Lb.50c

Q. S. & B. ALL PARKS MIXTURE

Our second best. This mixture of annual and perennial grasses is especially recommended when quick results are required. It is used in public parks, cemeteries, parkways, etc. Always gives satisfaction. It produces a velvety lawn of rich green color.

Price: 1 Lb.40c

Suggestions for the Preparation and Care of Lawns

The ground should be thoroughly drained, and if not naturally rich, fertilizers should be added before sowing. For this purpose bone dust, crushed bone, or fertilizers containing bone and potash are the best.

Work the soil by plowing or spading until thoroughly pulverized, being careful to leave the surface as near alike as possible, that the grass may be even in its growth. Finish by raking until made fine and level with roller.

Seeding may best be done in the spring or fall. If done during the hot months of summer the ground must be kept moderately moist when sowing is made. Let the surface be gone over with a fine rake and seed evenly scattered, after which carefully rake or brush the seed in and follow with roller.

One pound is sufficient for 150 square feet. Let the grass obtain a good start before cutting, say a height of three or four inches. When well rooted a lawn should be trimmed about every ten days. In very dry weather a thorough wetting should be given about once a week; a little water on a dry surface often doing more harm than good.

Old lawns can be improved and renewed by the application of fertilizers and seeding about one-half the quantity required for a new lawn.

SHADY PLACE

The "Shady Place" mixture we offer is composed of varieties which will grow under trees, in the shade from building, etc. Blends well with other grasses and produce a fine green lawn.

Price: 1 Lb.40c

Q. S. & B. GOOD MIXED LAWN SEED

Bright, clean seed of strong germination, but not sufficiently perfect to go to our better grades.

Price: 1 Lb.25c

Price on Lawn Grass Seed Subject to Change

Insects and bugs have been more destructive this year than ever before, numerous trees and shrubs have already been ruined in Chicago, and the pests are spreading. You should take steps to protect your property by spraying before it is too late.
